

Part B - Commenting on the Gypsy and Traveller Site Options

If you are commenting on multiple sites you will need to complete a separate sheet for each representation

Sheet of

The policy in the Draft Local Plan will list the criteria by which Gypsy and Traveller sites will be judged for suitability and sustainability. These are the criteria:

- Convenient access to a GP surgery, school and public transport;
- Avoiding areas with a high risk of flooding;
- Safe access to the road network and provision for parking, turning and servicing on site;
- Avoiding areas where there is the potential for noise and other disturbance;
- Provision of utilities (running water, toilet facilities, waste disposal, etc);
- Avoiding areas where there could be adverse impact on important features of the natural and historic environment; and,
- Sites which can be integrated into the landscape without harming the character of the area.
- Promotes peaceful and integrated co-existence between the site and the local community;
- Avoids placing undue pressure on local infrastructure and services;
- Reflects the extent to which traditional lifestyles (whereby some travellers live and work from the same location thereby omitting many travel to work journeys) can contribute to sustainability.

Please give your views about site suitability below with reference to this list of criteria.

Which site are you responding to?

Site GT04 – Land at Harbury Lane, Fosse Way

What is the nature of your representation?

Object

Please set out full details of your objection or representation of support with reference to the criteria above.

- **Convenient access to a GP surgery, school and public transport;**

This site is in excess of 1.5 miles from any GP surgery. The proposed site is outside of the catchment area of Harbury Surgery and the nearest surgery is the Warwick Gates Family Health Centre which is approximately 3 miles away which I understand is full so there is no convenient access to a surgery.

The position with regard to schooling is similar with GT03 being outside of the Harbury catchment area and Harbury Primary School has had recent issues with too many children already. There are several schools in Whitnash (over 2 miles away) with limited capacity.

The public transport whilst satisfactory, is largely irrelevant as the residents are unlikely to use anything other than their own transport. There is a bus stop on the Harbury Lane however there is no pedestrian links from that to the potential site.

Part B - Commenting on the Gypsy and Traveller Site Options

If you are commenting on multiple sites you will need to complete a separate sheet for each representation

Sheet of

- **Avoiding areas with a high risk of flooding**

The area is prone to flooding. Fields are often under water and livestock and ponies moved accordingly. The area is effectively a flood plain.

The Middle Road/Fosse Way junction is often flooded
Harbury Lane is often flooded and impassable.

- **Safe access to the road network and provision for parking, turning and servicing on site;**

The proposed 15 pitch site will contain up to 50 vehicles and generate hundreds of traffic movements daily. It is on the junction of two major roads and access into the traffic flow will possibly need highway improvements. It is possibly unwise to introduce even more traffic turns at this major junction and it will certainly add significantly to existing peak time delays. GT04 is sited on the junction of two main roads with high traffic flows and the Fosse Way in particular sees fast traffic despite the nearby speed camera and is a designated High Risk Route by the County Council. There have been more than 12 Serious Accidents at this junction over the last 3 years.

- **Avoiding areas where there is the potential for noise and disturbance**

This site is adjacent the Fosse Way a very busy and noisy main road.
In addition this is adjacent the Birmingham to London Chiltern railway line, causing both noise and a potential danger.

- **Provision of utilities (running water, toilet facilities waste disposal etc);**

The proposed site has no mains sewerage, drainage or gas so fails to meet the criteria. Also the electricity supply is a limited rural line and will possibly need to be upgraded to meet the very considerable increase in demand.

GT04 is considered by British Telecom to be too far from the Whitnash Telephone Exchange to provide an adequate telephone or internet service (They term it as a long line). They will not upgrade the system resulting in poor telephone connections and intermittent (<1mb) internet service.

GT04 does not have a reliable mobile phone service. There are no mobile phone networks that provide more than a mediocre service.

- **Avoiding areas where there could be an adverse impact on important, features of the natural and historic environment;**

This choice of site overlooks the fact that at this point the Fosse Way, as the original Roman road built nearly 2000 years ago is known, is on its original alignment and there is likely to be considerable archaeological remains in the area which will be destroyed by the development. There was also a tollhouse nearby in the 17th and 18th centuries and remains have been found. The site would be a blight on the vistas from the Grade I listed building, Chesterton Windmill which is maintained by Warwickshire County Council. The views from this famous, historic building would be of material consideration should a planning application ever be made.

- **Sites which can be integrated into the landscape without harming the character of the area.**

The proposed site will cover 0.8 hectares (8000 m²) which is larger than the New Windmill Football Ground and if the Enfusion (consultants) recommendation to include working space is adopted this would possibly increase to twice the area of the football ground. There will be a large variety of caravans and vehicles on the site so, being in the bottom of the valley, it cannot be integrated into the landscape without harming the visual appearance and character of the area. The site is also very visible from Chesterton Hill and would undoubtedly harm the character of the wider surrounding area.

- **Promotes peaceful and integrated co-existence between the site and the local community;**

In this respect the local community forms two distinct sections. There is a very small community of some 20 houses within half a mile of the site along the Fosse Way and the far greater community in the villages of Harbury and Whitnash over 1.5 miles away.

It will be difficult to integrate the residents into the local Fosse Way community as with up to 120 residents on site rather than integrate they will actually absorb the local community. This does not meet the criteria of a peaceful and integrated co-existence.

- **Avoids placing undue pressure on local infrastructure and services;**

The proposed site has no mains sewerage, drainage or gas so fails to meet the criteria. Also the electricity supply is a limited rural line and will possibly need to be upgraded to meet the very considerable increase in demand.

- **Reflects the extent to which traditional lifestyles (whereby some travellers live and work from the same location thereby omitting many travel to work journeys) can contribute to sustainability.**
