

## **Part B - Commenting on the Village Housing Options – continued**

7. The village has seen flooding issues in the past, developing this site will only worsen these issues.
8. I support the development of site 2 as any development on this site will have a far lesser impact on the landscape and the character of the village than if site 1 were developed.
9. The greenbelt survey in the consultation document does not correctly refer to site 2 but a much larger area of land. It therefore does not correctly assess the impact on site 2. The development of site two would be sensible as it is on the south side of the road with main part of the village.
10. All of the amenities are south of the village and as a mother it would seem sensible to keep children safe and away as much as possible from the A425
11. WDC could instruct any developer to solve the access issues to site 2 if access is not achievable.
